- Progress Meeting Notes 5 January 2017

1) SUMMARY

The City of Mercer Island engaged Cardinal Architecture to study the existing Boiler Building located on the east shore of Luther Burbank Park. The Boiler Building was built in 1928 to supply steam heat for the adjacent school. It was designed by FA Naramore Architect of Seattle, and is a 1,672 SF one story building with an 80 foot chimney. In 1974, a 520 SF one story structure was added to the south side of the original building, and the addition contains both men's and women's toilet rooms and a room to sell concessions. The buildings are concrete structures with brick veneer, and the chimney is a combination of concrete and brick. The Boiler Building has been used recently to support non-motorized boating classes. The classes are taught during summers at the adjacent Lake Washington docks and shoreline.

The purpose of the study was to evaluate the existing structure for safety, evaluate options for repairs and renovation, and to estimate construction and project costs. In addition, the study was to review options for expanding summer boating programs.

The current and proposed use of the Boiler Building for non-motorized boating instruction is the direction intended in the 2006 Luther Burbank Park Master Plan.

Steering Committee members:

Bruce Fletcher	Parks and Recreation Director
Diane Mortenson	Recreation Superintendent
Paul West	Parks Operations Superintendent
Ken Brooks	Parks Manager
Marcy Olson	Facilities Project Manager
Alex Harvey	Parks Team Member/Luther Burbank Park
Myra Lupton	Community member
Kate Lamperti	Friends of Luther Burbank Park

The consultants who worked on the study include:

Jim Cary & Jesse Belknap	Architects	Cardinal Architecture PC, Seattle
Greg Coons	Structural Engineer	SSF Engineers, Seattle
Trish Drew	Cost Estimator	DCW Collaborative Works, Seattle

Building Code Summary

The Boiler Building is currently permitted as a storage building with accessory toilet rooms and concessions space. As long as the current uses are maintained, the building is not required to upgrade to current building code requirements. If the uses are changed, from storage to meeting room for instance, or if major construction improvements are proposed, then building code compliant improvements will be required. Repairs, such as seismic repairs and building repairs are not considered major construction improvements or change of use.

Greg Coons, structural engineer at SSF Engineers of Seattle, reviewed the Boiler Building and the following is his report:

This report presents the results of our structural assessment study of the Luther Burbank Park Boiler Building located in Luther Burbank Park, Mercer Island Washington. The purpose of this assessment was to evaluate the general structural condition of the building in general accordance with ASCE 11-99, "Structural Condition Assessment of Existing Buildings", and the condition of the lateral force resisting system of the building and Chimney to identify deficiencies in accordance with ASCE/SEI 41-13 "Seismic Evaluation and Retrofit of Existing Buildings". Our conclusions are based on our site visit, the original architectural and structural drawings, our calculations, and our experience with other buildings of this age and construction.

We evaluated the overall structural condition in general accordance with ASCE 11-99 using the loading requirements of ASCE 7-10. Although, we observed cracking in some of the exterior concrete walls and roof, the cracks do not represent a life-safety hazard. In general, we found that the building is in good structural condition, and found no structural reason the building could undergo the proposed adaptive reuse. We also evaluated the reinforced concrete bathroom building roof structure and determined that the existing structure could support an assembly area occupancy.

Our seismic assessment was performed using the Tier 1 and Tier 2 procedures in accordance with ASCE 41-13. The Tier 1 procedure of ASCE 41 provides a method for visual screening using checklists to identify structural deficiencies related to seismic safety. Tier 1 visual screening is combined with a Tier 2 analytic evaluation for those elements identified as deficient during the screening process. Where new structural elements are recommended, they are designed to meet ASCE 41 strength requirements, and to meet new building code detailing. Performance objectives and seismic hazard were selected in accordance with the International Existing Building Code. Specifically, a Life-Safety performance objective was used with a BSE-1E seismic hazard. We found that although the building structure, by itself, meets the Life Safety performance objective, portions of the non-structural veneer and parapet caps do not. We recommend anchoring the brick veneer to the concrete backing walls, with Helifix, or equivalent, wall anchors adjacent to the primary building exits. In addition, we recommend anchoring the parapet caps to their supporting concrete walls below. Finally, we found that the chimney would be unstable during a seismic event and is a collapse hazard. We recommend a combination of height reduction, strengthening, and tying the chimney into the existing building structure.

In addition to the structural improvements, we recommend replacing the roofing and upgrading the toilet rooms.

LUTHER BURBANK PARK BOILER BUILDING STUDY

Accessibility Summary

The existing Boiler Building was evaluated for accessibility based on use. The storage portion of the building is not a public space and accessibility is not required. The existing entry doors do not meet accessibility standards and the existing flooring is very uneven and is also not compliant. The toilet rooms do not meet current accessibility standards based on entry doors, room access, plumbing fixture access, and accessories.

The location of the Boiler Building is on the shoreline, and downhill from the main parking lot. The current path from the parking lot is paved and in good shape. It passes the Administration Building, then continues down a steep hill to the shore and the north side of the Boiler Building. Because of the steep slope, however, the path exceeds the minimum required slope to meet current pedestrian access requirements.

At the beginning of the study, we met with Nino Johnson of Sail Sand Point and Barbara Gronseth of Kayak Academy to discuss their current summer youth programs and their

the document section of this report. Both programs use the Boiler Building for storage during their summer programs, and they share the storage space when both programs are operating at the same time. Currently the large boiler

Boating Instruction Summary

space is only used for storage. The toilet rooms are open to the public. Both Sail Sand Point and Kayak Academy said they would be interested in expanding their programs with more classes, more vessels, and even longer seasons that include rentals if there was more storage and the building was better outfitted to meet their needs. Additional needs include better toilet rooms, an indoor classroom, better storage organization, more storage and a concessions office to rent equipment. Kayak Academy also expressed interest in running a food concessions from the Boiler Building.

Sail Sand Point uses the floating dock on the south west end of the existing docks. Kayak Academy uses the rocky beach at the north end of the Boiler Building for launching. Neither program uses the extensive stationary docks, except to access the floating dock. Sail Sand Point expressed interest in modifying the dock area to include more floating docks. The docks were not included in this study, but the information is useful relative to the expanded use of the Boiler Building for instructional use.

2) PROJECT PHASE DESCRIPTIONS

The potential projects are separated into two phases. Phase I includes repair scope that also addresses seismic repair. This scope can be constructed without changing the use of the building or requiring that the entire building is improved to current building code requirements.

Phase II are construction projects that provide substantial improvements to the structure and site, and also change the building use from storage to public occupation. Phase II A creates a new path from the parking lot down to the Boiler Building and also converts the existing toilet room roof to an outdoor deck/ classroom. Phase II B changes the use of the storage area to new classroom space, new offices, and maintains boat storage below.

After the completion of both phases of construction, the boiler building will be seismically repaired, will have upgraded systems, and will also provide new program space for the City of Mercer Island Parks and Recreation Department.

PHASE I REPAIR PROJECT DESCRIPTION

- Install new foundation drainage at bottom of footings and connect to (E) site drainage.
- Remodel (E) bathrooms for accessibility and improved fixtures.
- Replace (E) framed walls in concession buildings with new concrete walls.
- Remove portion of (E) chimney. See options on sheet
 A4-31
- Remove existing boiler buildings roofing and install new built-up roofing
- Repair and reinforce (E) brick cladding and stone parapet cap on boiler building

PHASE IIA PROJECT DESCRIPTION

- New accessible path and stairs from top of hill to shoreline, including concrete ramps and stairs, asphalt paths and boardwalk
- New outdoor classroom deck on roof of (E) bathroom building

PHASE IIB PROJECT DESCRIPTION

- New second floor in boiler building with new entry, classroom and (2) offices
- New interior stairs and enclosed platform lift in boiler building
- New second floor entry on uphill (West) side of boiler building, connecting to phase IIA accessible route to top of hill
- Reinforce (E) brick cladding at new second floor entry.
- Remodel (E) concession area in bathroom building

3) STUDY DOCUMENTS

The following documents were produced during the study. They include Existing Drawings, Phase I & II Drawings, Construction & Project Cost Estimates, and Meeting Notes.

Scope of Work

Project Scope Description

The project consists of a preliminary design for the Luther Burbank Boiler Room building, and joined concessions/restroom facility. The project includes renovation and repair of the existing structure in Phase 1 including the removal of 10' of the smoke stack and reinforcement. Phase 2A consists of demolition of existing pathway to be replaced with new stairs, ramps, and new deck connected to the 2nd floor of the Boiler building. Phase 2B includes interior enhancements of the building, including new lift, new doors, concession room improvements, creation of second floor with connecting stairs, new floors, and thermal and moisture barrier enhancements to the walls and windows. An alternate Chimney Stack modification option is provided.

Project Design

Preliminary Plans dated December 16, 2016, and redline structural comments from SSF. Costs are based on elements from similar projects, local sub market, and directives from the design team.

Procurement

The costs provided herein are based on the assumption that the project will be delivered as design, bid, build. If CM GC deliver is considered, additional cost for pre-construction may be required.

Site Conditions and Constraints

It is expected that the work will be performed during regular working hours. The site is located near Lake Washington, but none of the labor or delivery of materials is expected to be provided water-side. If there are access constraints that prohibit land-side delivery, significant cost increases would be anticipated for water-side work or be provided at contractors expense.

Basis of Estimate

Assumptions and Clarifications

This estimate is based on the following assumptions and clarifications:

- 1 Hazardous materials abatement is anticipated.
- 2 The majority of work will be performed during regular business hours
- 3 Excludes soft costs, permits, and taxes
- 4 Site work is limited to work detailed in Phase IIA.

Luther Burbank Park Boiler Building Feasibility Study Kickoff Meeting Notes

Date:	Thursday, 3 November 2016
Location:	Aljoya House, Mercer Island WA
Attending:	Bruce Fletcher, Parks & Recreation Director
-	Paul West, Park Operations Superintendent
	Marcy Olson, Facility Project Manager
	Diane Mortenson, Recreation Superintendent
	Alex Harvey, Parks Maintenance
	Myra Lupton, Community Representative
	Jim Cary, Cardinal Architecture
	Jesse Belknap, Cardinal Architecture

Purpose: Kickoff Meeting

1) Introductions

2) Project Overview

- 2006 Luther Burbank Park Master Plan identifies the boiler building and adjacent docks as the location for human-powered boating activities.
- Feasibility Study to determine the condition and usability of the 1928 boiler building, and create a plan for implementing the Master Plan uses.
- Will review program, options and cost to provide information for decision-making.
- Boiler building is a nice, attractive building, and hope is that building can be repurposed, with necessary improvements, to meet needs of human-powered boating activities.
- Feasibility study to be complete by the end of January 2017.
- 3) Scope of Study
 - The Master Plan will direct the study as the team prepares development proposals.
 - The study will develop proposals to a conceptual level, and will prepare construction cost and project cost estimates for fundraising.
- 4) Process & Timing
 - Work will be performed by Cardinal Architecture (prime consultant, architect), Swenson Say Faget (structural engineer) and DCW Cost Management (cost estimating).
 - Existing evaluation will take place next week.
 - Meeting with City of Mercer Island Building, Planning, and Fire officials to take place next week, to review land use, shoreline, building code, accessibility, and fire requirements.
 - Meeting with potential boating concessionaires during this week and the next to develop building program requirements.
 - Team will first analyze the boiler building, determine needs, consider program options, and evaluate costs.
 - If the building is suitable for development, then the team will prepare options for site and building development. If the building is not suitable for development, then the team will propose options for replacement.

Cardinal Architecture PC 1326 5th Avenue #440 Seattle WA 98101 206 624-2365 cardinalarchitecture.com

- The design team will prepare a final report to inform future fundraising for developing the boiler building area into a human-powered boating facility.
- 5) Goals & Priorities, Around the Table
 - Bruce beautiful, under-utilized structure into year-round park facility with concessions, storage, events, meeting rooms; follow the master plan; beautiful building just the way it is, improve for safety
 - Alex usable cool building; too nice for storage, simple and open; weddings; event space; concerned about water running through the site
 - Diane expand current successful boating program; kayaks and sailboats; add food and drinks; concerned about site accessibility; take advantage of natural classroom setting; tiny trees preschool program
 - Paul building must stay; no potential to replace building there; \$5K per year to DNR just for shoreline use, would like to show return for investment
 - Myra started children's sailing program with Homer; expand program to include long waiting lists; expand the handkerchief fleet
- 6) Additional Discussion
 - Public and concessionaire interested in utilizing boiler building and protected boating area.
 - Kayaks, SUPs, Canoes, Sailboats, and Rowing all popular and interested in utilizing boiler building area.
 - Concern about the existing docks, too tall for most small boat use. Unlikely that docks can be expanded, but likely that existing dock space could be changed to be more effective for small boats. Possibly swap floating platforms for existing docks.
- 7) Action Items
 - Paul will schedule subsequent meetings for this group for the first week of December and the first week of January.
 - Cardinal and design team to begin work later today, with site and building survey next Tuesday.

Meeting notes will be sent by Cardinal Architecture to Paul West, Parks & Rec, who will distribute to the project team.

Luther Burbank Park Boiler Building Feasibility Study Kayak Academy Meeting Notes

Date:	Thursday, 3 November 2016
Location:	Boiler Building, Luther Burbank Park, Mercer Island WA
Attending:	Barbara Gronseth, Kayak Academy
	Paul West, Park Operations Superintendent
	Jim Cary, Cardinal Architecture
	Jesse Belknap, Cardinal Architecture

Purpose: Kayak Concessionaire Meeting

- 1) Great location for teaching kayaking, teach summer programs at Luther Burbank Park for 10 years.
- 2) Use the gravel beach to the north, and the best sheltered kayaking is to the north. Kayaks and swimmers are separated for safety. Do not use the docks as they are too tall and not the right conditions for kayak boarding and takeoff.
- 3) Parking is very important, have similar parking conditions at Lake Sammamish State Park.
- 4) Mercer Island Parks is also developing the South Parking Lot Boat Launch, which will have only a 200' walk from parking to a new gravel beach.
- 5) Would consider replacing finger docks with floating platforms.
- 6) Running current program at Lake Sammamish State Park, most equipment in containers which stay there all year, some equipment in open storage with locks.
- 7) Would like food concession as well, lots of traffic from beach, playground, walkers, boaters.
- 8) Boats typically stored on racks. Have made rolling racks that can be pushed outside during the day.
- 9) Constant boat usage would be great for KA, not just classes and lessons.
- 10) Have used a covered outdoor space, such as a tent, for setup and classes. Also prefer that their students get used to getting wet.
- 11) Would like to have 75-80 boats (kayaks and SUPs) on hand to make concessions most effective. Not just classes and lessons, but also rental as well.
- 12) Store boats, paddles, personal floatation devices.
- 13) Good relationship to Enatai Beach Park, east across the water beneath I-90 bridges.
- 14) Could promote use with Washington Water Trails and Lakes to Locks.

Meeting notes will be sent by Cardinal Architecture to Paul West, Parks & Rec, who will distribute to the project team.

Luther Burbank Park Boiler Building Feasibility Study City of Mercer Island Pre App Meeting Notes

Date:Tuesday, 8 November 2016Location:City Hall, Mercer Island WAAttending:Holly Mercier, Permit Coordinator
Evan Maxim, Planning Manager
Will Piro, Planner
Don Cole, Building Official
Hershel Rostov, Fire Marshal
Ruji Ding, Senior Development Engineer
Paul West, Park Operations Superintendent
Jim Cary, Cardinal Architecture

Purpose: Pre App Meeting, 2048 84th Avenue Southeast

- 1) Project Introduction Proposed project is a renovation to the 1928 Boiler Building located in Luther Burbank Park on the shore of Lake Washington. Current scope is a feasibility study to review the condition and safety of the existing structure and to prepare options for redeveloping the building to support the direction of the 2006 Luther Burbank Park Master Plan. The plan show that the boiler building will be upgraded to support human-powered boating. Initial project might include repairing existing toilet rooms, concessions, & storage area to make building safe and dry. Future project may include renovation of storage area to include classrooms, offices and additional toilet rooms.
- 2) Land Use
 - Luther Burbank Park is identified to be R-15 Residential 15,000 SF which allows for public park use.
 - Public Parks is addressed in 1902.010/A/6 which reads:
 - 6. Public park subject to the following conditions:
 - a. Access to local and/or arterial thoroughfares shall be reasonably provided.
 - b. Outdoor lighting shall be located to minimize glare upon abutting property and streets.
 - c. Major structures, ballfields and sport courts shall be located at least 20 feet from any abutting property.

Cardinal Architecture PC 1326 5th Avenue #440 Seattle WA 98101 206 624-2365 cardinalarchitecture.com

- d. If a permit is required for a proposed improvement, a plot, landscape and building plan showing compliance with these conditions shall be filed with the city development services group (DSG) for its approval.
- Future project may be reviewed under Shoreline Master Program. Future project may require a substantial development permit and/or SEPA review. Additional parking may also be required.
- Ordinary High Water Mark is 18.6 feet.
- Future project likely to be reviewed by Design Commission as a major capital improvement, as capital funds would be used for the construction project.
- Boiler Building is not a landmark structure. There is no landmark review requirement for COMI, and no desire or need to designate the structure as a landmark.
- Current use is defined as "storage accessory to park."
- The City's shoreline master program and shoreline environmental designation for Luther Burbank park designates this stretch of shoreline for public access and active and passive public recreation. (MICC 19.07.110(C))
- While not part of the current feasibility scope, Parks is reviewing renovations of the dock area to convert the tall, stationary docks with floating platforms.
- Any work associated with bulkhead would be reviewed by State of Washington Fish & Wildlife.
- Location is not specifically identified as wetlands, but there are wetlands nearby. Recommend wetland identification and analysis.
- 3) Building Code
 - Current structure is approximately 2,300 SF.
 - Accessibility building code requirement is that owner is required to spend 20% minimum of construction value on accessibility improvements. Priorities for accessibility include accessible path from parking to structure, accessible entry, and accessible toilet rooms.
 - Accessibility, per chapter 11 of the building code, will be reviewed and enforced from the parking lot to the structure. There are not trail or path allowances that deviate from chapter 11.
 - Location is identified as a landslide area on nwmaps.net. Location is also identified as a seismic hazard area.
- 4) Fire Code
 - Existing docks are grandfathered as is. Change of use or extensive renovations may trigger Fire Code 17.01.020 which increases the design load and requires standpipe service for docks for more than 5 vessels.
 - Existing building is grandfathered as is. Repairs to the existing building are not considered renovations. New or renovated commercial building is required to have sprinklers when greater than 5,000 SF. New or renovated commercial is required to have a fire alarm when greater than 3,000 SF. It is unlikely that the renovated boiler building would exceed these thresholds. It is likely that the City of Mercer Island will desire or require both sprinklers and fire alarm for the building renovation, regardless.
 - Access road for fire truck access should be provided all the way to building, to fire hydrant, and to fire department supplemental pump connection. There are many requirements for the road and turnaround, most of which are impractical due to the boiler building's shoreline and park location. The addition of sprinklers and fire alarm can be used to negotiate fire truck access requirements. A fire truck turnaround may be provided at the top of the hill. Ultimately, the project must have a safe building condition and an appropriate level of fire department access.
 - Fire sprinklers require a 4" minimum service.
- 5) Utilities

- Water main located north of building and stops at hydrant just north of structure. There is relatively good flow and pressure documented for existing water service.
- Side sewer leaves building to east to vault, then is pumped up hill to meet sewer main in existing playground area above boiler building.
- Electric power is buried service that connects to building in southwest corner.
- Roof drainage and site drainage are piped directly to lake and exit above high water mark.
- 6) Permitting Path
 - Permitting Path will be determined by scope of work. Repairs would be reviewed by the Building Department only. Change of Use to include classrooms and meeting rooms might trigger Shoreline Substantial Development Permit and SEPA review. Construction Permit would be required, and the addition of conditioned space would likely trigger requirements to meet accessibility, structural, and energy code requirements.
- 7) General Notes
 - Boiler Building Value on King County website is \$0, which is standard for public structures. Actual value can be determined by contacting King County Assessor's Office. Soon, value will be determined by a \$/SF calculation. The building value is how some requirements are enforced during the permitting process, and a higher existing building value gives the building owner more flexibility.

Meeting notes will be sent by Cardinal Architecture to Paul West, Parks & Rec and to Holly Mercier, Permit Coordinator, who will distribute to the city review team.

Luther Burbank Park Boiler Building Feasibility Study Sail Sand Point Meeting Notes

Date:	16 November 2016
Location:	Boiler Building, Luther Burbank Park, Mercer Island WA
Attending:	Nino Johnson, Sail Sand Point
	Paul West, Park Operations Superintendent
	Diane Mortenson, Recreation Superintendent
	CJ Stanford, Recreation Supervisor
	Jim Cary, Cardinal Architecture

Purpose: Concessionaire Meeting

- Sail Sand Point operates classes from boiler building location every summer. Classes are very
 popular and are filled very quickly. Classes are for 8-14-year -olds, and are operated in a younger
 and older group. Taught in 8'-12' dinghies. Classes are taught outdoors, and students are outside
 most of the time.
- 2) Equipment includes (6) sailing dinghies and a safety boat with a motor. There are (2) instructors per class.
- During summer lessons, the boiler building is used to store boats overnight and to store equipment. Currently the instructors motor down from Sand Point to Mercer Island every morning in the safety boat.
- 4) Future needs include boat storage space for (12) dinghies & rigging (double what they have now), classroom space, equipment storage, secure indoor camper cubbies, and restrooms. Outside storage is ok, but would have to be secure. Storage for the safety boat would be best if secured inside a fence or on top of the dock. Year-round boat storage would be ideal as well.
- 5) Equipment rental is appealing, but Nino said that rental works best with entry-level equipment like SUPs and kayaks. Easiest entry point.
- 6) Classes are typically 1 group for a week. Sometimes it's (2) 1/2-days for younger students of fulldays for older students.
- 7) Possibility of storing the safety boat at the boat launch inside of a new fence.
- 8) From Sail Sand Point perspective, current parking and drop-off were working.
- 9) Nino to send Jim specifications on SSP's typical dinghy, so that Cardinal can include boat sizes in the floor plans.

Meeting notes will be distributed by Cardinal Architecture.

Cardinal Architecture PC 1326 5th Avenue #440 Seattle WA 98101 206 624-2365 cardinalarchitecture.com

Luther Burbank Park Boiler Building Feasibility Study Meeting Notes

Thursday, 8 December 2016
Aljoya House, Mercer Island WA
Bruce Fletcher, Parks & Recreation Director
Paul West, Park Operations Superintendent
Marcy Olson, Facility Project Manager
Diane Mortenson, Recreation Superintendent
Ken Brooks, Parks Manager
Alex Harvey, Parks Maintenance
Myra Lupton, Community Representative
Kate Lamperti, Community Representative Jim Cary, Cardinal Architecture

Purpose: Progress Meeting

- 1) Introductions
- 2) Update Since our 3 November 2016 Kickoff Meeting
 - Kayak Academy Meeting 3Nov16 met with Barbara Gronseth to discuss KA's interest & needs; great location; concern about parking & access; would love to operate classes and rent kayaks & SUPs; 75-80 craft storage to be sustainable rental location; use north gravel beach as launch; could use floating platforms but cannot use pier dock
 - Architect & Structural Engineer Review 8Nov16 design team surveyed structure & site with help of Parks & Rec staff; recorded conditions for as-built documents; reviewed structural condition
 - City of Mercer Island Pre App Meeting 8Nov16 very useful meeting; met with Planning Department, Building Official, Fire Marshal, & City Utilities to discuss project direction; repairs are encouraged; use changes from current concessions & storage would trigger substantial alterations requirements; substantial alterations requirements include accessibility, fire protection, building structural review & repair; and energy code compliance; substantial alterations would trigger additional review such as Shoreline Substantial Development permit review and State Environmental Policy Act review; biggest challenge for substantial alterations may be fire protection requirements and access
 - Sail Sand Point Meeting 16Nov16 met with Nino Johnson to discuss SSP's interest & needs; great location; currently teaches classes with (6) Opti sailboats; could expand to (12) sailboats; would bring in kayaks & SUPs for rental concessions (easier as entry level rentals); use floating platform as launch; could use more floating platforms but cannot use pier dock
- 3) Existing Drawings Attached to these meeting notes are existing drawings pdf files. They represent the current building conditions and are documented in AutoCAD for future use.
- 4) Phase I Repair Drawings Attached to these meeting notes are repair drawings which describe important projects to make the existing building more safe and make the building more functional.

Cardinal Architecture PC 1326 5th Avenue #440 Seattle WA 98101 206 624-2365 cardinalarchitecture.com

They describe projects such as foundation drainage, existing wall repair, restroom improvements, brick masonry repair, and chimney changes. Performing these projects will not likely trigger the substantial alterations requirements, and will extend the useful life of the structure. The building is in in need of repair and seismic improvements, but is also in good shape. The design team was asked to determine if the building was in good enough shape to consider continued use. The reasons for replacing the building may be based on the potential construction budget, not because the building is considered beyond repair.

- 5) Phase II Preliminary Building Program Attached to these meeting notes is the preliminary building program document that collects and interprets the data from the meetings with Kayak Academy and Sail Sand Point. The program identifies the space needed or provided for various future uses and building functions.
- 6) Phase II Diagrams Attached to these meeting notes are drawings that provide an initial planning version of how the Boiler Building might be used in the future. The diagrams show how a 2nd floor could be added to the large, tall Boiler Building room. Based on the review and discussion, Cardinal was asked to look at options where the second floor was not added, however the outdoor classroom on top of the existing toilet rooms could be part of a project. Paul noted that the second floor addition actually reduced storage capacity, after a stair and elevator are included. Cardinal will prepare additional versions to show function and potential cost of each.
- 7) Action Items
 - Next progress meeting is Thursday 5 January 2017.
 - Cardinal will work with the Structural Engineer and Cost Estimator to document repairs and design options, and apply costs to the options to present at the next progress meeting.

Meeting notes will be sent by Cardinal Architecture to Paul West, Parks & Rec, who will distribute to the project team.

Luther Burbank Park Boiler Building Feasibility Study Meeting Notes

Date:	Thursday, 5 January 2017
Location:	Aljoya House, Mercer Island WA
Attending:	Bruce Fletcher, Parks & Recreation Director
•	Paul West, Park Operations Superintendent
	Marcy Olson, Facility Project Manager
	Diane Mortenson, Recreation Superintendent
	Ken Brooks, Parks Manager
	Myra Lupton, Community Representative
	Jim Cary, Cardinal Architecture
	Trish Drew, DCW Cost Management

Purpose: Progress Meeting

1) Introductions

- 2) Jim and Trish described the proposed projects identified as Phase I Repair, Phase IIA Site Access and Outdoor Deck, Phase IIB New Classroom & Offices. Trish provided initial cost analysis for the three phases. Her construction budgets are meant to be comprehensive and conservative, and are not meant to be a competitive construction cost bids. The numbers also reflect construction cost only. Construction costs are typically only 65% to 70% of total project costs. Total project cost can be estimated by multiplying the construction cost x 1.54 or 1.43. The project documentation and the cost analysis are attached to these meeting notes. Comments include:
 - Fire sprinklers might be included in Phase 1 Repair. Jim will call the fire marshal to confirm. Fire sprinklers will likely be a dry system, as there is currently no heat in the facility to prevent freezing, and only a portion of the facility is expected to be heated.
 - Adding the exterior deck may trigger substantial alterations, and the scope may be pushed to Phase IIB. Jim will call the building official to confirm.
 - It may be desired to heat the bathrooms, so that the bathrooms and the facility can be used yearround. There were also comments that most use would be planned for spring, summer and fall. The restrooms are currently heated by passive air flow, and they are open to the elements.
 - It may be useful to add a sink and hot water to the classroom area, so that meetings can make coffee. Hot water can be provided with an electric instant hot water heater.
 - There is a concern that there is not enough parking to accommodate the additional use at the Boiler Building. Jim will review the Master Plan to determine if this was anticipated. The P&R staff were certain that no additional parking was desired.
 - Freestanding tents or sunshades may be used on the new outdoor classroom deck.

3) Next steps include:

- Parks & Rec staff meeting with the Friends of Luther Burbank Park to introduce the research and project planning to date.
- After the Friends meeting, Parks & Rec staff and Cardinal meeting with Mercer Island City Council Parks Subcommittee to introduce the research and project planning to date.

Meeting notes will be sent by Cardinal Architecture to Paul West, Parks & Rec, who will distribute to the project team.
